

# “Prerequisites for effective utilization of PGR and Information System”

## 3<sup>rd</sup> Part

**Belul Gixhari**

**INSTITUTE OF PLANT GENETIC RESOURCES  
AGRICULTURAL UNIVERSITY OF TIRANA**

**Tirana, 2019**

# **1. Assessing the genetic diversity**

1.1 Geographic diversity,

1.2 Genetic diversity,

- Representativeness of diversity,
- Gaps analysis,

1.3 Assessment of cultivated crops diversity.

# **2. Prerequisites for effective utilization of PGR**

2.1 Organization of germplasm & documentation

2.2 Utilization of C&E data in practice.

# **3. Information System**

# 2

## **Prerequisites for effective utilization of PGR**

**2.1 Organization of germplasm & documentation.**

**2.2 Utilization of C&E data in practice**

## 2.1 Organization of germplasm & documentation (methods & criteria)

- **Organization of germplasm:**  
target collections, responsibility of germplasm.
- **Classification of crops diversity:**  
cultivated species, wild species, breeding materials.

### □ Organizing documentation data

- **Passport data** for genetic materials:
  - application of Descriptor Lists
  - application of EURISCO descriptors.
- **Characterization and evaluation data:**
  - application of Multicrops Descriptor Lists
  - application of EURISCO descriptors.
  - application of field trials.

# Results: Organizing germplasm data

## Germplasm target collections

- **Base collections:** 3317 acc., 106 species.
- **Active collections:** 270 acc., 19 species.
- **Pendent collections (stocks):** 594 acc., 50 species.
- **Field collections:** 663 acc., 38 species.
- **Responsibility of germplasm:** researcher, curator, etc
- **Development of NI database:** 4345 acc. 148 species;

## Classification of crops diversity

### **cultivated species:**

- landraces or
- traditional local varieties,

**(51%),**

### **wild species:**

- for direct use,
- indirect use,
- potentially utilizable.

**(20%),**

### **Breeding lines, advanced cultivars/ commercial varieties.**

**(22%).**  
**(2%).**

### **special stocks of cultivated crops.**

# Results: Passport data

## EURISCO Descriptors

<b>0. National Inventory code (NICODE)</b>	Example: ALB
<b>1. Institute code (INSTCODE)</b>	Example: ALB017
<b>2. Accession number (ACCENUMB)</b>	Example: AGB0789
<b>3. Collecting number (COLLNUMB)</b>	Example: FE;HS027-11
<b>4. Collecting institute code (COLLCODE)</b>	Example: ALB017
<b>5. Genus (GENUS)</b>	Example: Allium
<b>6. Species (SPECIES)</b>	Example: paniculatum
<b>7. Species authority (SPAUTHOR)</b>	Example: L.
<b>8. Subtaxa (SUBTAXA)</b>	Example: subsp. fuscum
<b>9. Subtaxa authority (SUBTAUTHOR)</b>	Example: (Waldst. et Kit.) Arc.
<b>10. Common crop name (CROPNAME)</b>	Example: malting barley
<b>11. Accession name (ACCENAME)</b>	Example: Rheinische Vorgebirgstrauben; Emma; Avlon
<b>12. Acquisition date (ACQDATE)</b>	Example: 1968----;
<b>13. Country of origin (ORIGCTY)</b>	Example: 20020620
<b>14. Location of collecting site (COLLSITE)</b>	Ex: 7km south of Curitiba in the state of Parna
<b>15. Geographical coordinates</b>	
<b>16. Elevation of collecting site [masl] (ELEVATION)</b>	Example: 763
<b>17. Collecting date of sample [YYYYMMDD] (COLLDATE)</b>	Example: 1968----; Ex: 20020620
<b>18. Breeding institute code (BREDCODE)</b>	FAO Institute Code of the institute that has bred the material.
<b>19. Biological status of accession (SAMPSTAT)</b>	
<b>100)</b> Wild; <b>110)</b> Natural; <b>120)</b> Semi-natural/wild; <b>200)</b> Weedy; <b>300)</b> Traditional cultivar/landrace	
<b>400)</b> Breeding/research material; <b>410)</b> Breeder's line; <b>411)</b> Synthetic population; <b>412)</b> Hybrid	
<b>413)</b> Founder stock/base population; <b>414)</b> Inbred line (parent of hybrid cultivar); <b>415)</b> Segregating population;	
<b>420)</b> Mutant/genetic stock; <b>421)</b> Mutant, <b>423)</b> Other gene stocks <b>500)</b> Advanced/improved cultivar; <b>600)</b> GMO,	
<b>999)</b> Other (Elaborate in REMARKS field)	

## **Results:**

Organizing germplasm on target collections & classification of crops diversity

= was found **useful & practical** in management of a target collection

**Organizing documentation** according to genebank procedures using international standards

= was very **practical & effective** in management of germplasm

Using Standard Descriptors for Passport data:

- = **very useful and effective** in:
  - management of plant germplasm
  - identification of germplasm &
  - accessibility information system

# 2

## **Prerequisites for effective utilization of PGR**

**2.1 Organization of germplasm & documentation**

**2.2 Utilization of C&E data in practice**

# Characterization & evaluation: criteria

Components of variation:  $P = G + E + G*E$

## Characterization, basic criteria

- Description of specific characteristics.
- Characteristics highly inherited (qualitative traits).
- Easy to see and score.
- Expressed consistently in all environments.
- Characters check for the genetic integrity.

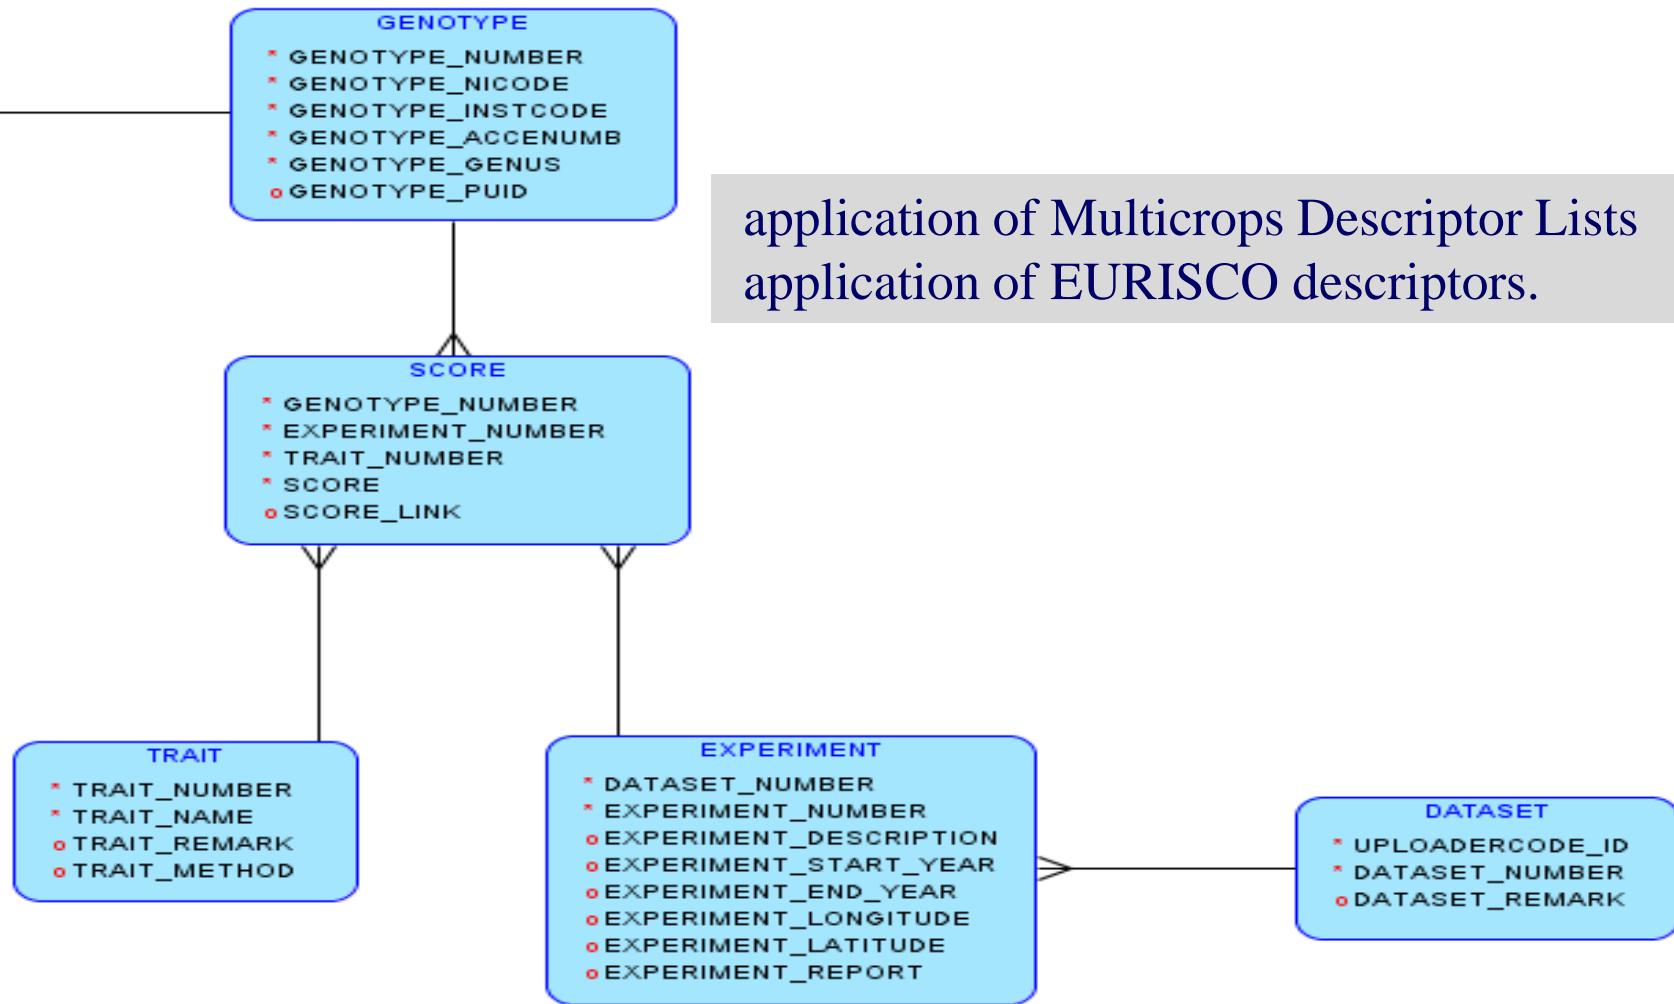

## Evaluation, basic criteria

- Carried out in trials with replications.
- Retrieve all possible information on quantitative characteristics.
- Standards, and possibly methods and dataformats
- Photo documentation,
- Products / product documentation

## Statistical analysis (C&E data)

- ANOVA, High significance Test, PCo analysis, Genetic Distances, Correlations, PCA.

# Results: Characterization & evaluation data

# Results: Characterization & evaluation data

## Results C&E:

- 1) identified germplasm (genotypes; high inherited traits; useful traits),
- 2) select germplasm (the best acc., as parents)
- 3) identified useful traits = **important for breeding & production.**

## Conclusions: organizing germplasm & documentation

- Prerequisites for effective utilization of plant germplasm.
- Passport data facilitate identification & germplasm accessibility.
- Gene reserves for breeding and pre breeding programs.
- Traits useful for plant breeding & production.
- Utilization of collected materials (**landraces and wild species**).
- Designation of Origin (especially): **PDO**- protected designation of origin;  
**PGI**- protected geographical indication;

= **very effective in management of plant germplasm:**

(regeneration, characterization, distribution, & in sustainable farmer seeds).

## 2.2 Utilization of C&E data in practice

### Breeding and pre breeding,

- In genebank **breeding has low priority** because:
  - Steps before breeding program,
  - Long term investment,
  - Creation of large population of potential parental lines,
  - Utilization of secondary and tertiary gene pool,
  - In-crossing of unwanted traits,

**But:**

**C&E trials are very important** because:

- **identified important traits useful for plant breeding & production.**

## Bio-morphological & molecular data.

- Pea 28 acc\*\*. (15 QL traits + 23 QN characters).  
Pea 28 acc. ( 14 RBIP markers)  
14 retrotransposon-based insertion polymorphism (RBIP)
- Grass pea 14 acc\*\*. (10 QL traits + 14 QN characters).  
Grass pea 14 acc. (7 RAPD markers).  
Random Amplified Polymorphic DNA (RAPD)
- Tobacco 24 acc. (10 QL traits + 14 QN characters).
- Sorghum 20 acc. (12 QL traits + 23 QN characters) (2018-19)  
Sorghum 22 acc. DNA analysis in Germany.

\*\*Pea & Grass pea data in collaboration with co-authors

## Results: Pea 28 acc. (15 QL traits + 23 QN characters + 14 RBIP markers)

- C&E trials (morphological & mol. markers) identified diversity among pea genotypes.
- Genetic distances/similarity by mol. markers showed higher similarity in comparison to conventional morphological methods (UPOV).
- Mol. markers  $r = 0.71 > r = 0.67$  (morphological traits) demonstrated the importance of mol. markers in characterization.
- The relationship: morphological x mol. markers results = 68%.
- Results are beneficial to pea germplasm database & to breeding programs in pea.

# **Results: Grass pea 14 acc. (10 QL traits + 14 QN characters + 7 RAPD markers)**

## **Conclusion:**

### **The field trials & factorial analysis:**

- permitted the **evaluation of genetic variability** of peas landraces group,
- identified the **most important agro-morphological traits** with potential for **sustainable the future peas & grass pea breeding programs.**
- **Factorial analysis** ( $\text{PCA}_{123} = 80.5\% \text{ of var.}$ ) found: **agro-morphological traits useful for breeding & production:**
- **(agro-morphological traits as DM, DP, DF, PH, LLL (PC}\_1\text{); LS, NPP, NSP, YG (PC}\_2\text{), highly correlated (r: 0.72 to 0.93): can be used successfully as morphological markers.**
- **The amount of genetic variability** found **suggest** the collected landraces **have variability available to the breeders,**
- **Variability** is sufficient for the creation of new favourable gene combinations to sustain field grass pea breeding programs.

- ✓ Characterization of tobacco germplasm found a very important scientific information on tobacco genetic diversity.
- ✓ Results of the study increase usage value of the tobacco genetic materials conserved in Genebank and they are a concrete contribution for good tobacco information, and an important interest for tobacco germplasm database and for further tobacco breeding programs.

Sorghum 22 acc. DNA analysis ..... in Germany.

## Conclusion sorghum (1<sup>st</sup> year):

### The field trials & statistical analysis:

- assessed genetic variability of sorghum germplasm & identified the most important agro-morphological traits with potential for sustainable the future sorghum breeding programs.
- The amount of genetic variability found suggest that especially collected sorghum samples have variability available to the breeders, sufficient for the creation of new favourable combinations for an improved variety.

## **3. Information System**

**WEB links**

### 3. Information System: WEB links

The image displays two screenshots of websites. The top screenshot shows the homepage of the Faculty of Economics and Agribusiness at the University of Agriculture in Tirana. It features a green header with the university's logo and menu options like 'RETH UBT', 'APLIKIMET', 'JETA AKADEMIKE', 'KERKIMI SHKENCOR', 'LIBRARI', 'SHËRBIME', 'POLITIKAT E PRIVATESE', and 'LOGIN'. Below the header is a banner with the text 'FAKULTETI I EKONOMISE & AGROBISNESIT' and 'UNIVERSITETI BUJQESOR I TIRANËS'. The main content area has a yellow background with the text 'Information System:' and 'Other prerequisites for effective utilization of PGR'. The bottom screenshot shows the Plant Genetic Resources Center (PGR) website. It features a large orange header with the center's name and a sunflower graphic. Below the header is a navigation bar with links to 'HOME', 'PLANT GENETIC RESOURCES CENTER', 'PLANT GENETIC RESOURCES', 'AGRICULTURE TECHNOLOGY TRANSFER CENTERS', 'PUBLICATIONS', and 'MANAGEMENT'. On the left, there's a calendar for March 2015 and a 'MENU' section. The main content area includes sections for 'INTRODUCTION', 'LANGUAGE' (with English and Shqip options), and 'ALBANIAN INSTITUTION' (listing ATTC/QTTB, AUT, and MoARDWM). To the right, there's a scenic image of agricultural fields under a blue sky.

INSTITUTI I RESURSEVE GJENETIKE TË BIMËVE

## Institute of Plant Genetic Resources

The Institute of Plant Genetic Resources (IPGR), as a primary unit of Agricultural University of Tirana, is the national institution which coordinates the activities in the field of conservation and management of plant genetic resources (PGR). It is a relatively new institution which had been created in 2002.
